SUMMARY

Final-year CS student (GPA 3.22) specializing in backend development with ASP.NET Core. Delivered a full-stack social platform using clean architecture, Repository and Unit of Work patterns, full async operations, and efficient pagination. Practical experience integrating AI APIs (Hugging Face) into production-style Python applications. Strong foundation in SOLID principles, EF Core, and relational database design.

EDUCATION

●Bachelor's in Computer Science

Expected June 2026

Cairo Higher Institute for Engineering, Computer Science and Management (CHI)

CGPA: 3.22

PROJECTS

●Social Media App

Jan 2024 – Present

Community-based platform with posts, threaded discussions, and user interactions

🐙 GitHub

- Architected a layered social platform using ASP.NET Core 8.0 MVC with clean architecture, decoupling business logic from data access via Repository and Unit of Work patterns
- Implemented full async/await throughout the request pipeline, reducing thread blocking and improving throughput under concurrent load
- Built server-side pagination for posts and comments, limiting DB reads and keeping response times consistent at scale
- Designed and exposed RESTful APIs with structured JSON responses, enabling clean separation between backend and any future frontend client
- Tech Stack:** ASP.NET Core 8.0, C#, SQL Server, EF Core

●IloveText

Sep 2023 – Dec 2023

AI-powered text processing web application with NLP capabilities

🐙 GitHub

- Designed the full application architecture from scratch, establishing a clean separation between input handling, API integration, and output rendering
- Integrated the Hugging Face Inference API to apply NLP models (summarization, classification) on user-submitted text, delivering results through a structured Python backend
- Built an end-to-end flow (input → processing → output) with a lightweight frontend, keeping the interface intuitive and the backend independently testable
- Tech Stack:** Python, HTML, CSS, Hugging Face API

TECHNICAL SKILLS

Languages: C#, Python

Frameworks: ASP.NET Core, .NET Core, Django, Django REST Framework (DRF)

Databases: SQL Server

Tools: Docker, Git, EF Core, LINQ

Concepts: REST APIs, OOP, SOLID Principles, Data Structures & Algorithms, Clean Architecture

CERTIFICATIONS

●ALX Software Engineering Program
